Question 1

What are data structures?

Your Answer : Ways of organizing, storing, and managing data so that computer programs can perform operations efficiently.

Correct Answer : A

Question 2

What are the main operations performed on data structures?

Your Answer : Insertion, deletion, and sorting.

Correct Answer : A

Question 3

What are linear data structures?

Your Answer : Data structures that store data elements hierarchically.

Correct Answer : A

Question 4

Which data structure stores elements of the same type in continuous memory locations?

Your Answer : Array

Correct Answer : D

Question 5

Which data structure allows efficient insertion and deletion?

Your Answer : Stack

Correct Answer : C

Question 6

What is the principle followed by a stack?

Your Answer : Last In Last Out

Correct Answer : B

Question 7

What is the principle followed by a queue?

Your Answer : First In First Out

Correct Answer : B

Question 8

What are non-linear data structures?

Your Answer : Data structures that store data elements hierarchically or through networks.

Correct Answer : B

Question 9

Which data structure consists of nodes connected through edges?

Your Answer : Queue

Correct Answer : D

Question 10

Why are data structures important?

Your Answer : They improve data analysis and visualization.

Correct Answer : A
